

**STRATEGIC MANAGEMENT OF THE WORKFORCE IN BULGARIA THROUGH
INTEGRATED SOCIAL DIALOGUE**

DEISLAVA YANEVA¹

Summary

This article discusses the conceptual idea that the successful regulation of the labor force in Bulgaria requires transparent mechanisms for social control in the field of labor, through which to achieve optimal balance between individual, group and public interests. The thesis is argued that on the basis of a measurable indicator - Labor Force Index, which accumulates the key factors contributing to its development in Bulgaria, will be possible to improve the tripartite Social dialogue between the representative bodies responsible for labor regulation and increase the productivity and the income from work.

Key words: Strategic management; Theory of constraints; Labor force; Social Dialogue; Key Performance Indicators
